EDUCATION

Carnegie Mellon University

B.S. in Information Systems & Human-Computer Interaction; GPA: 3.5/4.0

Pittsburgh, PA

Expected May 2027

Relevant Coursework: Data Structures & Algorithms, Computer Systems, Software Engineering Foundations, Database Design & Development, Application Design & Development, AI & Machine Learning, Human-Computer Interaction

EXPERIENCE

PNC Financial Services

Software Engineering Intern – GenAI Engineering Team

Pittsburgh, PA

Jun 2026 – Aug 2026

- Designed and built a **Request for Proposal (RFP) Response Autobuilder** using **React, Django, and Microsoft Azure**, automating question extraction, source-backed answer retrieval through **PNC's Knowledge Search RAG API**, response generation, and publishing into client templates; targeted **~80%** of a **~20-hour** manual workflow.
- Built a backend **orchestration layer** to coordinate the RFP workflow and make runtime routing decisions, screening **LLM-generated responses** against risk and compliance criteria, proposing remediations, and routing flagged outputs to human review.
- Shipped **persona-based chat personalization** for **Knowledge Search**, a RAG platform serving **~20,000 users**, building **Django REST APIs** for group management, bulk many-to-many user-group assignments, and configurable controls for automatically applying role-specific chat configurations.
- Improved the **reliability and observability** of the platform by patching application vulnerabilities and instrumenting tenant-level usage and **response latency metrics** in its **React/Django Insights** dashboard; shipped to production.

Allegheny County DHS (Analytics, Technology, & Planning)

Software Engineering Intern

Pittsburgh, PA

Feb 2026 – Apr 2026

- Built a full-stack **Starred Clients** feature in **Python/Django**, adding a data model, database migration, and **permission-aware REST API** endpoints for starring, unstarring, and retrieving client dashboard metadata.
- Engineered a bug reporting and troubleshooting pipeline using **TypeScript**, **Python/Django**, and **REST APIs** that converts user-submitted issues into Jira tickets with embedded session replay links, shortening the path from user report to triage.
- Wrote **automated unit and integration tests** covering core API flows and edge cases in a production codebase, integrating with existing auditing, role/provider context, and test infrastructure.

The Silicon Project

Lead Developer & Board Director

New York, NY

Jun 2022 – Present

- Led a **10-person engineering team** through the full software development lifecycle—planning, prototyping, code review, testing, and deployment—of a **JavaScript/React/Node.js** platform with **PostgreSQL**, Stripe-powered checkout, donor intake workflows, and an internal employee portal serving **2,600+ users**.
- Designed secure **RESTful API services** for donor tracking and inventory management using **SQL and JavaScript/TypeScript**, supporting **\$420K+ in donations** and diverting **34,000+ lbs of e-waste**.

PROJECTS

NodeBB Open-Source Contributor | *JavaScript/Node.js, Redis, Git, GitHub Actions, Docker*

Sep 2025 – Nov 2025

- Delivered a “Post Anonymously” plugin in a team fork using an **Agile workflow with peer code review**, implementing hooks, administrator settings, and permission checks across **16 merged pull requests**.
- Built **CI/CD automation** with GitHub Actions and introduced mutation testing to strengthen edge-case coverage, improving upstream compatibility and deployment reliability.

Roi Du Pain Bakery | *Ruby on Rails, SQLite, Cucumber, MaterializeCSS*

Jan 2025 – May 2025

- Developed a full-stack e-commerce platform with session-based authentication and **role-based access control** across five user types (customers, managers, bakers, shippers, guests), enforced at both the controller and view layers.
- Built catalog browsing, session-backed cart, checkout with shipping cost calculation, and order-fulfillment workflows plus versioned **RESTful JSON API** endpoints; verified with **Cucumber and Minitest suites at 100% coverage**.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C, Ruby, HTML/CSS

Frameworks: React, Django, Node.js, Ruby on Rails, Next.js, Tailwind CSS, REST APIs

AI/ML: Azure OpenAI, Azure AI Search, Retrieval-Augmented Generation (RAG), LLM APIs, Multi-Agent Systems

Databases & Cloud: PostgreSQL, MongoDB, SQLite, Microsoft Azure

Practices: Agile, Scrum, code review, unit & integration testing, CI/CD, technical documentation

Developer Tools: Git, GitHub, Jira, Jenkins, GitHub Actions, Docker, Postman
