EDUCATION

Carnegie Mellon University

B.S. in Information Systems & Human-Computer Interaction; GPA: 3.5/4.0

Pittsburgh, PA

Expected May 2027

Relevant Coursework: Data Structures & Algorithms, Computer Systems, Principles of Software Construction, Software Engineering Foundations, Database Design & Development, Application Design & Development, AI & Machine Learning

EXPERIENCE

PNC Financial Services

Software Engineering Intern – GenAI Engineering Team

Pittsburgh, PA

Jun 2026 – Aug 2026

- Designed and built an **agentic Request for Proposal (RFP) Response Autobuilder** using **React, Python, and Microsoft Azure**, automating question extraction, source-backed retrieval through PNC's Knowledge Search RAG API, response generation, and publishing into client templates; targeted **~80%** of a **~20-hour** manual workflow.
- Engineered a **backend orchestration layer** to coordinate the RFP workflow and make runtime routing decisions, screening LLM-generated responses against risk and compliance criteria, proposing remediations, and routing flagged outputs to human review.
- Shipped **persona-based chat personalization** for the **PNC Knowledge Search platform**, an internal RAG platform serving roughly **20,000 users** across the company, with **Django REST APIs** for group management, bulk user assignments, and role-specific configurations.
- Improved **reliability and observability** by documenting and patching application vulnerabilities and adding tenant-level usage and response-latency metrics to the platform's **React/Django Insights dashboard**.

Allegheny County DHS (Analytics, Technology, & Planning)

Software Engineering Intern

Pittsburgh, PA

Feb 2026 – Apr 2026

- Developed a full-stack **Starred Clients** feature using **React, TypeScript, and Django**, letting users mark key clients for quick access; implemented the frontend, supporting data model and migration, and permission-aware **REST API** endpoints for starring, unstarred, and retrieving client data.
- Engineered a **bug reporting pipeline** using **React, TypeScript, and Django** that converts user-submitted issues into Jira tickets with embedded session replay links, shortening the path from user report to triage.
- Wrote **automated test coverage** for core API flows and edge cases in a production codebase, integrating with existing auditing, role/provider context, and test infrastructure.

The Silicon Project

Lead Developer & Board Director

New York, NY

Jun 2022 – Present

- Lead a **10-person engineering team** through the full software development lifecycle—planning, prototyping, code review, testing, and deployment—of a **JavaScript/React/Node.js** platform with **PostgreSQL**, Stripe-powered checkout, donor intake workflows, and an internal employee portal serving **2,600+ users**.
- Designed secure **RESTful API services** for donor tracking and inventory management using **SQL and JavaScript/TypeScript**, supporting **\$420K+ in donations** and diverting **34,000+ lbs of e-waste**.

PROJECTS

TradeSync | *Java, Spring Boot, React, TypeScript, PostgreSQL, Docker*

Apr 2026 – Present

- Built a full-stack **trade reconciliation platform** using **Java, Spring Boot, React, TypeScript, and PostgreSQL** to compare internal and external CSV records and detect missing trades, duplicates, and financial mismatches.
- Designed **REST APIs** and a **Flyway-managed persistence layer** for reconciliation history, source records, exception tracking, resolution statuses, and auditable review notes.
- Implemented Apache Commons CSV validation, **37 automated backend tests**, **Docker Compose** infrastructure, and a responsive Tailwind CSS interface for uploading files, filtering results, and reviewing exceptions.

NodeBB Open-Source Contributor | *JavaScript/Node.js, Redis, Git, GitHub Actions, Docker*

Sep 2025 – Nov 2025

- Delivered a “Post Anonymously” plugin in a team fork using an **Agile workflow with peer code review**, implementing hooks, administrator settings, and permission checks across **16 merged pull requests**.
- Built **CI/CD automation** with GitHub Actions and introduced mutation testing to strengthen edge-case coverage, improving upstream compatibility and deployment reliability.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C, Ruby, HTML/CSS

Frameworks: React, Spring Boot, Django, Node.js, Ruby on Rails, Next.js, Tailwind CSS

AI/ML: Azure OpenAI, Azure AI Search, Retrieval-Augmented Generation (RAG), LLM APIs

Databases & Cloud: PostgreSQL, MongoDB, SQLite, Redis, Microsoft Azure

Practices: Agile, code review, unit & integration testing, CI/CD, technical documentation

Developer Tools: Git, GitHub, Jira, Jenkins, GitHub Actions, Docker, Postman
